OBJECTIVE

Full Stack Bootcamp Graduate with 9+ years of management and leadership experience, currently seeking a Front End Development position in which I can cultivate my passion for architecting web applications.

TECHNICAL SKILLS

JavaScript, React, Redux, JQuery, mySQL, API's, Git, NodeJS, Express, Jest, Handlebars, MongoDB, GraphQL, IndexedDB, Salesforce, Figma, Slack

EDUCATION

University of Texas at Austin | Full Stack Web Development Certificate | *June 2022 - No Expiry*

WORK EXPERIENCE

Teaching and Learning Assistant | UT Austin Full-Stack Development Bootcamp | June 2022 – present | Austin, TX
▪ Guiding students to build autonomy and passion for front end development
▪ Assisting instructor and students with resolving technical issues in software and debugging code
▪ Effective and efficiently communicating resources and deadlines with instructor and cohort
▪ Managing access to class Git repository
▪ Reporting deprecated methodologies in class curriculum to ensure lessons are maintaining current standards

General Manager | Banger's Sausage House & Beer Garden | October 2018 – February 2022 | Austin, TX
▪ Integrated and troubleshot multiple point-of-sale platforms, inventory systems, and employee scheduling systems.
▪ Primary point of contact and liaison between Banger's and customers for event and daily operations management.
▪ Responsible for maintaining positive short and long term customer relationships in a high volume environment.
▪ Contributed to Banger's ability to sell Event services and other premium upsell opportunities with customers.

General Manager | Theo's Neighborhood Pizza | September 2011 – November 2017 | New Orleans, LA
▪ Built, modified, and maintained interviewing and onboarding processes for all new staff enablement and training.
▪ Deploy and support new processes to optimize day-to-day operations with the goal of improving business planning.
▪ Defined process architecture for driving P/L management systems, inventory management and turnover mitigation.
▪ Manage operations in partnership with regional leaders to drive sales and improve productivity while mentoring staff.

PROJECTS

Karmatic | React Single Page App
Karmatic is a hub for communities to come together and help each-other through volunteer work. To construct the platform I used React, NodeJS, Express, GraphQL, Styled Components and JWT. Implementing state hooks to update data in real time without page reloads and using Bcrypt to secure user credentials. Additionally, created queries and mutations to retrieve and update the GraphQL DB and more.

Quacker | Social Media Website
Quacker demonstrates sign in functionality for a website. In designing the product my team came up with an intuitive design that users would be familiar with. GitHub, MySQL, Nodejs, Session, Express, Handlebars and Materialize were all used for this wireframe.

Sunday Funday | API Project
Sunday Funday uses open source APIs to provide users with cocktail drink recipes and provides users with US NBA and NFL dates and times. HTML, CSS, JS and APIs were the foundation for this project.
